

City of Stoughton Systems Automation Coordinator

Stoughton Utilities is seeking a skilled and innovative Automation Systems Coordinator to support and advance the technologies that power our electric, water, and wastewater operations. This highly technical role oversees the configuration, maintenance, and optimization of essential automation platforms—including SCADA systems, the Outage Management System (OMS), and a variety of control, networking, and data systems. If you're passionate about system automation, strategic problem-solving, and contributing to reliable community utilities, this is an exciting opportunity to use your expertise in a dynamic environment.

In this position, you will program and deploy SCADA components, maintain OMS workflows and customer-facing tools, troubleshoot alarms and system events, and coordinate upgrades to hardware, software, and cybersecurity protections. You'll collaborate with utility teams across electric, water, and wastewater divisions, support field staff, develop documentation, provide system training, and assist with planning and integration of new technologies. From motor control systems to networked field devices, your work will ensure seamless operation and continuous improvement of mission-critical infrastructure.

Qualified candidates will have a bachelor's degree in electrical engineering, computer science, or related training, along with experience in SCADA, utility operations, or industrial automation. Strong knowledge of automation protocols, PLC/RTU configuration, networking, scripting, and platforms such as AVEVA InTouch, AspenTech OSI monarch, SEL, and Rockwell Automation is preferred. Candidates must be able to pass required pre-employment background checks, a physical and drug screen, and possess a valid Wisconsin driver's license and reliable transportation.

If you're looking for a challenging, impactful role that blends technology, innovation, and community service, we encourage you to apply.

This is a full-time, exempt position with a pay rate of \$50.00 per hour. The role includes an excellent benefits package, including participation in the Wisconsin Retirement System (WRS).
